

About Capitol Gains

Our Mission

Capitol Gains is on a mission to bring transparency to the world of political stock trading. We're not just another finance website: we're the watchdogs of Wall Street and Washington, all rolled into one sleek platform.

Our goal? To help track politician's trades than you can say "insider trading". (Just kidding, we're sure it's all above board - right?)

Because knowledge is power, and power is, well, you know the rest.

What We Do

Capitol Gains is developing a platform for tracking American politicians' stock trades, ensuring transparency and enabling the public to make informed decisions.

The platform scrapes data from a website that tracks congressional stock trades and parses the information into a structured format. The application updates daily by scraping this data and storing it in a MySQL database. Using Python (Django) for the backend and React for the frontend, users can view, filter, and analyze trading activities of different groups of politicians (e.g., Democratic Senators or Republican Congressmen).

The goal is to allow users to track and model their investment strategies based on politician trading activities, adhering to the 2012 STOCK Act.

Key Features

- Daily updates of politician trading activities
- Filter trades by political party, chamber, and/or names
- Analyze trading patterns and performance
- Track your favorite politicians (or least favorite, we don't judge)
- Compliance with the 2012 STOCK ACT

Our Customers

While we're primarily developing this application for our professor and TAs, we have bigger dreams. We're designing Capitol Gains for the public - for anyone who wants to keep tabs on the stock market success (or not) of their elected officials

Our platform aims to provide transparency, enabling users to rank politicians by their stock market earnings and gain insights from congressional trading patterns. Because, let's face it, who doesn't want to know if their senator is better at picking stocks than they are?

The Team Behind the Trades

We're Project Team 11, who has come forth with a vengeance to avenge all the Team 11's that came before us. Some say we are just unlucky, but we prefer to think of ourselves as turning it up to 11!

Our team motto? "May our code be as clean as our politicians' trading records" (We're still working on both...)

Proudly completing our project by Thanksgiving at UW-Madison
